Jan. 10, 2008

1 [We urge you to stop the yucca mountain radioactive waste storage program. Both the site and the plan to ship these materials from all over the country are so dangerous, so misconceived, that it's absurd the plans have gotten to this stage. The site was long ago shown to be unsafe, located on several fault lines. And the plans to ship radioactive waste by rail and by truck seriously endanger millions of people unnecessarily. The whole scheme is an idiot's disaster waiting to happen. It is absolutely irresponsible and outrageous! We hope that, unlike so many in the Bush administration, you are part of the "reality-based community," and can see the foolishness of this plan. Those are real people's lives you're playing with.]

Sincerely,
Randall Shields
